Agentic AI is a one-way door

- SaaS applications are being reinvented.
- Tomorrow's agents will massively outnumber today's applications.
- Data-first architectures will be durable.

Enterprise success with AI - questionable.

“High curiosity, low conversion”.

Adnan Masood

“That capability-absorption gap is real”.

Azeem Azhar

capability-*reliability* gap

Although AI systems have learned to perform an impressive set of tasks, they struggle to complete those tasks with the **consistency and accuracy demanded in real-world settings.**

Just How Bad Would an AI Bubble Be?

By Rogé Karma

The Atlantic

The underlying data problem

Agents can't find truth buried in the enterprise data mess

RELTIO

Process adherence
needs the full **unified** context.

RELTIO

Data is a precursor
to things in the physical world.

Accuracy matters.

RELTIO

Timely data
delivers **responsive** experiences.

Unified core data

RELTIO

Augmented with a semantic layer

RELTIO

Forming a **System of Context** scaled across the enterprise

RELTIO

Building with AI ?

- Moats come from **data, distribution, and trust**
- Pricing is strategy, not an afterthought
- Every feature must scale economically
- Differentiation has to go deeper than “adding AI”

Miqdad Jaffer
Product Lead at OpenAI

RELTIO

Keynote outline (15 minutes)

System of Context

Personal anecdote to open. Cost of getting data wrong & acceleration of AI.

- Data is the precursor to things in the physical world. Burger example.

Problem statement:

- AI agents need a complete set of information, instantly, to make the right autonomous decisions

POV

- The entire agentic AI rests entirely on our ability to trust them. And building a system of context unlocks that trust.
- System of context is :
 - An intelligent 360 view (360,
 - Real-time
 - Trusted (entity resolved, governed)
 - Self-learning

AI Conference Keynote Title/Abstract

Bridging the Data Chasm for the Agents of the Future

Soon, applications will be experienced as simple prompts to autonomous AI agents—but behind that simplicity lies a complex data landscape. Enterprises today are navigating AI transformation while contending with data debt accumulated from siloed systems and fragmented data. Organizations faced with the urgency to realize AI impact now must find a scalable way to harness trusted data across the enterprise. In this keynote presentation, Ansh Kanwar, Chief Product Officer at Reltio explains how to accelerate that transformation with the assets that you have today - and build a blueprint to make AI agents enterprise-ready, now.

“That capability-absorption gap is real”.
